SYS

U S E R M A N U A L

SYS by mC.dsg

Sys is named after a file used in operating systems. It is a sofa full of configurations which, starting from a modular structural alphabet adaptable to the needs of the designer, it gives the possibility to create seats that fit well in contexts such as waiting rooms, work spaces, museums, restaurants, schools, shops and meeting and sharing areas.

Thanks to an extremely fast and intuitive connection system (by modules), it is possible to disassemble, move and econfigure your sofa according to the needs of the moment.Sys is made up of a painted steel frame, which creates the housing for the modules to be inserted, giving the sofa a strong and recognizable connotation.

In addition to the seats in fire-retardant foam (ergonomic and resistant) there are accessories such tables and armrests in natural wood or upholstered. They can always be implemented, to satisfy the most diverse design and operational needs.
